

2023 Agricultural Day Project

Children who have calves, lambs, goats and chickens **DO NOT** have to complete this project as time during Term 3 should be spent working on and caring for your animals.

All other children from Year 4 up who do not have an animal for Agricultural Day are expected to complete the following project. Year 3 students may complete the project if they like.

Any queries should be directed to teachers or Mrs Glasgow early – don't leave the project until the last minute!

Wind Chimes Use of Natural or Recycled Materials

Part One:

Research and design a plan for what you think would be a great wind chime to hang up at your home. Think about the materials you will use (either natural or recycled - or a mixture of both.)

Is your selection of materials going to be reasonably weatherproof and make a sound when the wind blows (without breaking if the wind is strong)?

You need to consider

- the shape and size of your wind chime
- where you will hang it at home
- how you will hang it?

Explain why you have made these decisions and where you will hang it at home.

This information needs to be presented in an attractive and accurate way. You can choose the means of presentation e.g. chart, booklet, poster, powerpoint, brochure, mobile, etc. Include photos of you working through the steps in making your wind chime as well. **This must be handed in with your wind chime and will be considered by the judge alongside your finished wind chime.**

Part Two:

Collect the natural or recycled materials that you have decided to use for your wind chime.

Complete your design plan and make your wind chime.

The wind chime should be no bigger than 60cm square (but may be smaller.)

Part Three: Bring your finished wind chime and brief to school during the week before AG day. No later than Friday 22 September as this is the day they will be judged.

Have Fun!
